AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

What is claimed:

- 1. (Original) A beverage composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) at least about 8 mEq/L of potassium; and (e) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg.
- 2. (Currently amended) The beverage of claim 1 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.
- 3. (Currently amended) The beverage of claim 1 wherein said carbohydrate source is a mixture of a minimum of three of the following types of carbohydrates: sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate with the amount of fructose, if selected, always less than the total amount of glucose from all sources.
- 4. (Original) The beverage of claim 1 wherein said sodium comprises from about 30 to about 100 mEq/L.
- 5. (Original) The beverage of claim 1 wherein said sodium comprises from about 30 to about 60 mEq/L.
- 6. (Original) The beverage of claim 1 wherein said sodium comprises from about 33 to about 40 mEq/L.

- 7. (Original) The beverage of claim 4 wherein said sodium comprises from about 10 to about 50 mEq/L of sodium chloride and from about 10 to about 50 mEq/L of sodium citrate.
- 8. (Original) The beverage of claim 5 wherein said sodium comprises from about 10 to about 30 mEq/L of sodium chloride and from about 10 to about 30 mEq/L of sodium citrate.
- 9. (Original) The beverage of claim 1 wherein said chloride comprises from about 11 to about 18 mEq/L.
- 10. (Original) The beverage of claim 1 wherein said potassium comprises from about 8 to about 20 mEq/L.
- 11. (Currently amended) The beverage of claim 1 further comprising calcium from about 1 to about 6 mEq/L calcium.
- 12, (Currently amended) The beverage of claim 1 further comprising magnesium from about 1 to about 6 mEq/L magnesium.
- 13. (Currently amended) The beverage of claim 1 further comprising a flavoring from about 1 to about 0.4% by weight of a flavoring agent.
- 14. (Currently amended) The beverage of claim 1 further comprising a clouding agent from about 0 to about 100 part per million of a clouding agent.
- 15. (Currently amended) A beverage composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) at least about 8 mEq/L of potassium; (e) from about 1 to about 6 mEq/L of calcium; (f) from about 1 to about 6 mEq/L of magnesium; (g) from about 0 to about 0.4% by weight of a flavoring agent; (h) from about 0 to about 100 parts per million of a clouding agent; and (i) water; wherein the osmolality of said beverage is in the range of from

about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.

- 16. (Currently amended) The beverage of claim 15 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.
- 17. (Original) The beverage of claim 15 wherein said sodium comprises from about 30 to about 100 mEq/L.
- 18. (Original) The beverage of claim 15 wherein said sodium comprises from about 30 to about 60 mEq/L.
- 19. (Original) The beverage of claim 15 wherein said sodium comprises from about 33 to about 40 mEq/L.
- 20. (Original) The beverage of claim 17 wherein said sodium comprises from about 10 to about 50 mEq/L of sodium chloride and from about 10 to about 50 mEq/L of sodium citrate.
- 21. (Original) The beverage of claim 18 wherein said sodium comprises from about 10 to about 30 mEq/L of sodium chloride and from about 10 to about 30 mEq/L of sodium citrate.
- 22. (Original) The beverage of claim 15 wherein said chloride comprises from about 11 to about 18 mEq/L.
- 23. (Original) The beverage of claim 15 wherein said potassium comprises from about 8 t0 about 20 mEq/L.
- 24. (Original) The beverage of claim 15 wherein said calcium comprises from about 1 to about 3 mEq/L.

- 25. (Original) The beverage of claim 15 wherein said magnesium comprises from about 1 to about 3 mEq/L.
- 26. (Currently amended) A beverage composition comprising: (a) from about 4.5 to about 6.5% by weight of carbohydrates; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) at least about 8 mEq/L of potassium; (e) from about 1 to about 3 mEq/L of calcium; (f) from about 1 to about 3 mEq/L of magnesium; (g) from about 0 to about 0.2% by weight of a flavoring agent; (h) from about 0 to about 50 parts per million of a clouding agent; and (i) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.
- 27. (Currently amended) The beverage of claim 26 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.
- 28. (Currently amended) A beverage composition comprising; (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 30 to about 40 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) at least about 8 mEq/L of potassium; (e) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.
- 29. (Currently amended) The beverage of claim 28 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.

- 30. (Original) The beverage of claim 28 wherein said sodium comprises from about 10 to about 20 mEq/L of sodium chloride and from about 10 to about 20 mEq/L of sodium citrate.
- 31. (Original) The beverage of claim 28 wherein said chloride comprises from about 11 to about 18 mEq/L.
- 32. (Original) The beverage of claim 28 wherein said potassium comprises from about 8 to about 20 mEq/L.
- 33. (Currently amended) The beverage of claim 28 further comprising ealeium from about 1 to about 6 mEq/L calcium.
- 34. (Currently amended) The beverage of claim 28 further comprising magnesium from about 1 to about 6 mEq/L magnesium.
- 35. (Currently amended) A beverage composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) from about 8 to about 20 mEq/L of potassium; and (e) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.
- 36. (Currently amended) The beverage of claim 35 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.
- 37. (Original) The beverage of claim 35 wherein said sodium comprises from about 30 to about 60 mEg/L.

- 38. (Original) The beverage of claim 35 wherein said sodium comprises from about 30 to about 40 mEq/L.
- 39. (Original) The beverage of claim 37 wherein said sodium comprises from about 10 to about 30 mEq/L of sodium chloride and from about 10 to about 30 mEq/L of sodium citrate.
- 40. (Original) The beverage of claim 38 wherein said sodium comprises from about 10 to about 20 mEq/L of sodium chloride and from about 10 to about 20 mEq/L of sodium citrate.
- 41. (Original) The beverage of claim 35 wherein said chloride comprises from about 11 to about 18 mEq/L.
- 42. (Original) The beverage of claim 35 wherein said potassium comprises from about 10 to about 19 mEq/L.
- 43. (Currently amended) The beverage of claim 35 further comprising ealeium from about 1 to about 6 mEq/L calcium.
- 44. (Currently amended) The beverage of claim 35 further comprising magnesium from about 1 to about 6 mEq/L magnesium.
- 45. (Currently amended) A beverage composition: (a) from about 4.5 to about 6.5% by weight of carbohydrates; (b) from about 30 to about 40 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) from at about 8 to about 20 mEq/L of potassium; (e) from about 1 to about 3 mEq/L of calcium; (f) from about 1 to about 3 mEq/L of magnesium; (g) from about 0 to about 0.2% by weight of a flavoring agent; (h) from about 0 to about 50 parts per million of a clouding agent; and (i) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.
- 46. (Original) The beverage of claim 45 further comprising citric acid.

- 47. (Original) The beverage of claim 46 having a pH of from about 2.5 to about 4.5.
- 48. (Original) The beverage of claim 47 wherein said beverage is isotonic.
- (Currently amended) The beverage of claim 45 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.
- 50. (Currently amended) A beverage composition comprising; (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filing of the extracellular fluid compartment; and; (c) at least about 8 mEq/L of potassium; and (d) water; wherein the osmolality of said beverage is in the range of from about 250 to 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.
- 51. (Currently amended) The beverage of claim 50 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.
- 52. (Currently amended) The beverage of claim 50 further comprising from about 1 to about 6 mEq/L [[of]] calcium.
- 53. (Currently amended) The beverage of claim 50 further comprising from about 1 to about 6 mEq/L [[of]] magnesium.
- 54. (Original) The beverage of claim 50 wherein said ions which favor the filling of the extracellular fluid compartment comprise sodium and chloride ions.

- (Currently amended) A beverage composition comprising; (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filling of the extracellular fluid compartment; (c) at least about 8 mEq/L of potassium; (d) from about 1 to about 6 mEq/L of calcium; (e) from about 1 to about 6 mEq/L of magnesium; (f) from about 0 to about 0.4% by weight of a flavoring agent; (g) from about 0 to about 100 parts per million of a clouding agent; and (h) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.
- 56. (Original) The beverage of claim 55 wherein said ions which favor the filling of the extracellular fluid compartment comprise sodium and chloride ions.
- 57. (Original) The beverage of claim 55 wherein said ions which favor the filling of the extracellular fluid compartment comprises from about 42 to about 70 mEq/L.
- 58. (Original) The beverage of claim 55 wherein said ions which favor the filling of the extracellular fluid compartment comprises from about 46 to about 60 mEq/L.
- 59. (Original) The beverage of claim 57 wherein said potassium comprises from about 8 to about 20 mEq/L.
- 60. (Original) The beverage of claim 57 wherein said calcium comprises from about 1 to about 3 mEq/L.
- 61. (Original) The beverage of claim 57 wherein said magnesium comprises from about 1 to about 3 mEq/L.
- 62. (Currently amended) A beverage composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filling of the extracellular fluid compartment; (c) from about 8 to about 20 mEq/L of potassium; (d) from about 1 to about 6 mEq/L of calcium; (e) from about 1 to about 6 mEq/L of

magnesium; (f) from about 0 to about 0.4% by weight of a flavoring agent; (g) from about 0 to about 100 parts per million of a clouding agent; and (h) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.

- 63. (Original) The beverage of claim 62 wherein said ions which favor the filling of the extracellular fluid compartment comprise sodium and chloride ions.
- 64. (Original) The beverage of claim 62 wherein said ions which favor the filling of the extracellular fluid compartment comprises from about 42 to about 70 mEq/L.
- 65. (Original) The beverage of claim 62 wherein said ions which favor the filling of the extracellular fluid compartment comprises from about 46 to about 60 mEq/L.
- 66. (Original) The beverage of claim 62 wherein said potassium comprises from about 10 to about 19 mEq/L.
- 67. (Original) The beverage of claim 62 wherein said calcium comprises from about 1 to about 3 mEq/L.
- 68. (Original) The beverage of claim 62 wherein said magnesium comprises from about 1 to about 3 mEq/L.
- 69. (Currently amended) A beverage composition comprising: (a) from about 4 to about 10% by weight of carbohydrate source; (b) greater than about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 3 to about less than 16 mEq/L of potassium; and (e) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.

- 70. (Original) The beverage of claim 69 wherein said sodium comprises up to about 100 mEq/L.
- 71. (Original) The beverage of claim 69 wherein said sodium comprises up to about 60 mEq/L.
- 72. (Original) The beverage of claim 69 wherein said sodium comprises from about 33 to about 40 mEq/L.
- 73. (Original) The beverage of claim 69 wherein said chloride comprises from about 10 to about 50 mEq/L.
- 74. (Original) The beverage of claim 69 wherein said chloride comprises from about 11 to about 20 mEq/L.
- 75. (Original) The beverage of claim 69 wherein said potassium comprises from about 8 to about 16 mEq/L.
- 76. (Currently amended) The beverage of claim 69 further comprising calcium from about 0.1 to about 6 mEq/L <u>calcium</u>.
- 77. (Currently amended) The beverage of claim 69 further comprising magnesium from about 0.1 to about 6 mEq/L magnesium.
- (Currently amended) A beverage composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) greater than about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 3 to about less than 16 mEq/L of potassium; (e) at least about 0.1 to about 6 mEq/L of magnesium; (f) at least about 0.1 to about 6 mEq/L of calcium; (g) from about 0 to about 0.4% by weight of a flavoring; (h) from about 0 to about 100 ppm of a clouding agent; (i) from about 0.24 to about 0.45% by weight of citric acid; and (j) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350

mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.

- 79. (Original) The beverage of claim 78 wherein said sodium comprises up to about 100 mEq/L.
- 80. (Original) The beverage of claim 78 wherein said sodium comprises up to about 60 mEq/L.
- 81. (Original) The beverage of claim 78 wherein said sodium comprises from about 33 to about 40 mEq/L.
- 82. (Original) The beverage of claim 78 wherein said chloride comprises from about 10 to about 50 mEq/L.
- 83. (Original) The beverage of claim 78 wherein said chloride comprises from about 11 to about 20 mEq/L.
- 84. (Original) The beverage of claim 78 wherein said potassium comprises from about 8 to about 16 mEq/L.
- 85. (Currently amended) A beverage composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 1.0 mEq/L of magnesium; (e) at least about 0.1 mEq/L of calcium; and (f) water; wherein the osmolality of said beverage is in the range of from about 250 to about 350 mOsm/Kg, and wherein said beverage composition promotes fluid retention and stimulates voluntary fluid consumption.
- 86. (Original) The beverage of claim 85 wherein said sodium comprises from about 30 to about 100 mEq/L.

- 87. (Original) The beverage of claim 85 wherein said chloride comprises from about 10 to about 50 mEq/L.
- 88. (Original) The beverage of claim 85 wherein said magnesium comprises from about 1 to about 6 mEq/L.
- 89. (Original) The beverage of claim 85 wherein said calcium comprises from about 0.1 to about 6 mEq/L.
- 90. (Original) The beverage of claim 85 further comprising at least 7 mEq/L of potassium.
- 91. (Original) The beverage of claim 90 wherein said potassium comprises from about 7 to about 25 mEq/L.
- 92. (Currently amended) The beverage of claim 91 further comprising; (a) from about 0 to about 0.4% by weight of a flavoring agent; (b) from about 0 to about 100 ppm of a clouding agent; and (c) from about 0.24 to about 0.45% by weight critic acid.
- 93. (Currently amended) A concentrate composition that, when constituted with a liquid, produces a fluid composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; and (d) at least about 8 mEq/L of potassium; wherein the osmolality of said fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 94. (Currently amended) The concentrate composition of claim 93 wherein said liquid [[is]] comprises water.
- 95. (Original) The concentrate composition of claim 93 wherein said liquid is a sports beverage.

- 96. (Original) The concentrate composition of claim 93 wherein said liquid includes at least on electrolyte.
- 97. (Original) The concentrate composition of claim 93 wherein said liquid includes a carbohydrate.
- 98. (Original) The concentrate composition of claim 93 wherein said liquid includes at least one electrolyte and a carbohydrate.
- 99. (Currently amended) The concentrate composition of claim 93 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.
- 100. (Currently amended) The concentrate composition of claim 93 wherein said carbohydrate source is a mixture of a minimum of three of the following types of carbohydrates: sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate with the amount of fructose, if selected, always less than the total amount of glucose from all sources.
- 101. (Original) The concentrate composition of claim 93 wherein said sodium comprises from about 30 to about 100 mEq/L.
- 102. (Original) The concentrate composition of claim 93 wherein said sodium comprises from about 30 to about 60 mEq/L.
- 103. (Original) The concentrate composition of claim 93 wherein said sodium comprises from about 33 to about 40 m Eq/L.

- 104. (Original) The concentrate composition of claim 101 wherein said sodium comprises from about 10 to about 50 mEq/L of sodium chloride from about 10 to about 50 mEq/L of sodium citrate.
- 105. (Original) The concentrate composition of claim 102 wherein said sodium comprises from about 10 to about 30 mEq/L of sodium chloride and from about 10 to about 30 mEq/L of sodium citrate.
- 106. (Original) The concentrate composition of claim 93 wherein said chloride comprises from about 11 to about 18m Eq/L.
- 107. (Original) The concentrate composition of claim 93 wherein said potassium comprises from about 8 to about 20 mEq/L.
- 108. (Currently amended) The concentrate composition of claim 93 that, when constituted with a liquid, produces a fluid composition further comprising ealeium from about 1 to about 6 mEq/L calcium.
- 109. (Currently amended) The concentrate composition of claim 93 that, when constituted with a liquid, produces a fluid composition further comprising magnesium from about 1 to about 6 mEq/L magnesium.
- 110. (Currently amended) The concentrate composition of claim 93 that, when constituted with a liquid, produces a fluid composition further comprising a flavoring from about 0 to about 0.4% by weight of a flavoring agent.
- 111. (Currently amended) The concentrate composition of claim 93 that, when constituted with a liquid, produces a fluid composition further comprising a clouding agent from about 0 to about 100 parts per million of a clouding agent.

- 112. (Currently amended) A concentrate composition that, when constituted with a liquid, produces a fluid composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) at least about 8 mEq/L of potassium; (e) from about 1 to about 6 mEq/L of calcium; (f) from about 1 to about 6 mEq/L of magnesium; (g) from about 0 to about 0.4% by weight of a flavoring agent; (h) from about 0 to about 100 parts per million of a clouding agent; and (i) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 113. (Original) The concentrate composition of claim 112 wherein said sodium comprises from about 30 to about 100 mEq/L.
- 114. (Original) The concentrate composition of claim 112 wherein said sodium comprises from about 30 to about 60 mEq/L.
- 115. (Original) The concentrate composition of claim 112 wherein said sodium comprises from about 33 to about 40 mEq/L.
- 116. (Original) The concentrate composition of claim 113 wherein said sodium comprises from about 10 to about 50 mEq/L of sodium chloride and from about 10 to about 50 mEq/L of sodium citrate.
- 117. (Original) The concentrate composition of claim 114 wherein said sodium comprises from about 10 to about 30 mEq/L of sodium chloride and from about 10 to about 30 mEq/L of sodium citrate.
- 118. (Original) The concentrate composition of claim 112 wherein said chloride comprises from about 11 to about 18 mEq/L.

- 119. (Original) The concentrate composition of claim 112 wherein said potassium comprises from about 8 to about 20 mEq/L.
- 120. (Original) The concentrate composition of claim 112 wherein said calcium comprises from about 1 to about 3 mEq/L.
- 121. (Original) The concentrate composition of claim 112 wherein said magnesium comprises from about 1 to about 3 mEq/L.
- 122. (Currently amended) A concentrate composition that, when constituted with a liquid, produces a fluid composition comprising: (a) from about 4.5 to about 6.5% by weight of carbohydrates; (b) from about 30 to about 40 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) from at about 8 to about 20 m Eq/L of potassium; (e) from about 1 to about 3 mEq/L of calcium; (f) from about 1 to about 3 mEq/L of magnesium; (g) from about 0 to about 0.2% by weight of a flavoring agent; (h) from about 0 to about 50 parts per million of a clouding agent; and (i) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 123. (Currently amended) A concentrate composition that, when constituted with [[a]] sufficient liquid, produces a fluid composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filling of the extracellular fluid compartment; and; (c) at least about 8 mEq/L of potassium; and (d) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 124. (Currently amended) The concentrate composition of claim 123 wherein said carbohydrate source is selected from the group consisting of sucrose, maltose, maltodextrin, glucose, galactose, trehalose, fructose, fructo-oligosaccharides, beta-glucan, and trioses such as pyruvate and lactate and mixtures thereof.

- 125. (Currently amended) The concentrate composition of claim 123 that, when constituted with [[a]] the liquid, produces a fluid composition further comprising from about 1 to about 6 mEq/L of calcium.
- 126. (Currently amended) The concentrate composition of claim 123 that, when constituted with [[a]] the liquid, produces a fluid composition further comprising from about 1 to about 6 mEq/L of magnesium.
- 127. (Currently amended) The concentrate composition of claim 123 that, when constituted with [[a]] the liquid, produces a fluid composition further comprising: (a) from about 0 to about 0.4% by weight of a flavoring agent; and (b) from about 0 to about 100 parts per million of a clouding agent.
- 128. (Currently amended) The concentrate composition of claim 127 that, when constituted with [[a]] the liquid, produces a fluid composition further comprising from about 1 to about 6 mEq/L [[of]] calcium.
- (Currently amended) The concentrate composition of claim 128 that, when constituted with [[a]] the liquid, produces a fluid composition further comprising from about 1 to about 6 mEq/L [[of]] magnesium.
- 130. (Original) The concentrate composition of claim 123 wherein said ions which favor the filling of the extracellular fluid compartment comprise sodium and chloride ions.
- 131. (Currently amended) A concentrate composition that, when constituted with [[a]] sufficient liquid, produces a fluid composition comprising: (a) from about 4% to about 10% by weight of carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filling of the extracellular fluid compartment; (c) at least about 8 mEq/L of potassium; (d) from about 1 to about 6 mEq/L of calcium; (e) from about 1 to about 6 mEq/L of magnesium; (f) from about 0 to about 0.4% by weight of a flavoring agent; (g) from about 0 to about 100 parts per

million of a clouding agent; and (h)water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid composition.

- 132. (Original) The concentrate composition of claim 131 wherein said ions which favor the filling of the extracellular fluid compartment comprise sodium and chloride ions.
- 133. (Original) The concentrate composition of claim 131 wherein said ions which favor the filling of the extracellular fluid compartment comprises from about 42 to about 70 mEq/L.
- 134. (Original) The concentrate composition of claim 131 wherein said ions which favor the filling of the extracellular fluid compartment comprises from about 46 to about 60 mEq/L.
- 135. (Original) The concentrate composition of claim 131 wherein said potassium comprises from about 8 to about 20m Eq/L.
- 136. (Original) The concentrate composition of claim 131 wherein said calcium comprises from about 1 to about 3 mEq/L.
- 137. (Original) The concentrate composition of claim 131 wherein said magnesium comprises from about 1 to about 3 mEq/L.
- 138. (Currently amended) A concentrate composition that, when constituted with a liquid, produces a fluid composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 40 to about 78 m Eq/L of ions which favor the filling of the extracellular fluid compartment; (c) from about 8 to about 20 mEq/L of potassium; (d) from about 1 to about 6 mEq/L of calcium; (e) from about 1 to about 6 mEq/L of magnesium; (f) from about 0 to about 0.4% by weight of a flavoring agent; (g) from about 0 to about 100 parts per million of a clouding agent; and (h) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.

- 139. (Original) The concentrate composition of claim 138 wherein said ions which favor the filling of the extracellular fluid compartment comprise sodium and chloride ions.
- 140. (Original) The concentrate composition of claim 138 wherein said ions which favor the filling of the extracellular fluid compartment comprises from about 42 to about 70 mEq/L.
- 141. (Original) The concentrate composition of claim 138 wherein said ions which favor the filling of the extracellular fluid compartment comprises from about 46 to about 60 mEq/L.
- 142. (Original) The concentrate composition of claim 138 wherein said potassium comprises from about 10 to about 19 mEq/L.
- 143. (Original) The concentrate composition of claim 138 wherein said calcium comprises from about 1 to about 3 mEq/L.
- 144. (Original) The concentrate composition of claim 138 wherein said magnesium comprises from about 1 to about 3 mEq/L.
- 145. (Currently amended) A concentrate composition that, when constituted with a liquid, produces a fluid composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate course; (b) greater than about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 3 to about less than 16 m Eq/L of potassium; and (e) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 146. (Original) The concentrate composition of claim 145 wherein said sodium comprises up to about 100 mEq/L.

- 147. (Original) The concentrate composition of claim 145 wherein said sodium comprises up to about 60 mEq/L.
- 148. (Original) The concentrate composition of claim 145 wherein said sodium comprises from about 33 to about 40 mEq/L.
- 149. (Original) The concentrate composition of claim 145 wherein said chloride comprises from about 10 to about 50 mEq/L.
- 150. (Original) The concentrate composition of claim 145 wherein said chloride comprises from about 11 to about 20 mEq/L.
- 151. (Original) The concentrate composition of claim 145 wherein said potassium comprises from about 8 to about 16 mEq/L.
- 152. (Currently amended) The concentrate composition of 145 that, when constituted with a liquid, produces a fluid composition further comprising ealeium from about 0.1 to about 6 mEq/L calcium.
- 153. (Currently amended) The concentrate composition of 145 that, when constituted with a liquid, produces a fluid composition further comprising magnesium from about 0.1 to about 6 mEq/L magnesium.
- 154. (Currently amended) A concentrate composition that, when constituted with a liquid, produces a fluid composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) greater than about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 3 to about less than 16 mEq/L of potassium; (e) at least about 0.1 to about 6 mEq/L of magnesium; (f) at least about 0.1 to about 6 mEq/L of calcium; (g) from about 0 to about 0.4% by weight of a flavoring; (h) from about 0 to about 100 ppm of a clouding agent; (i) from about 0.24 to about 0.45% by weight of citric acid; and (j) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and

wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.

- 155. (Original) The concentrate composition of claim 154 wherein said sodium comprises up to about 100 mEq/L.
- 156. (Original) The concentrate composition of claim 154 wherein said sodium comprises up to about 60 mEq/L.
- 157. (Original) The concentrate composition of claim 154 wherein said sodium comprises from about 33 to about 40 mEq/L.
- 158. (Original) The concentrate composition of claim 154 wherein said chloride comprises from about 10 to about 50 mEq/L.
- 159. (Original) The concentrate composition of claim 154 wherein said chloride comprises from about 11 to about 20 mEq/L.
- 160. (Original) The concentrate composition of claim 154 wherein said potassium comprises from about 8 to about 16 mEq/L.
- 161. (Currently amended) A concentrate composition that, when constituted with [[a]] sufficient liquid, produces a fluid composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 1.0 mEq/L of magnesium; (e) at least about 0.1 mEq/L of calcium; and (f) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 162. (Original) The concentrate composition of claim 161 wherein said sodium comprises from about 30 to about 100 mEq/L.

- 163. (Original) The concentrate composition of claim 161 wherein said chloride comprises from about 10 to about 50 mEq/L.
- 164. (Original) The concentrate composition of claim 161 wherein said magnesium comprises from about 1 to about 6 mEq/L.
- 165. (Original) The concentrate composition of claim 161 wherein said calcium comprises from about 0.1 to about 6 mEq/L.
- 166. (Currently amended) The concentrate composition of claim 161 that, when constituted with [[a]] the liquid, produces a fluid composition further comprising at least 7 mEq/L [[of]] potassium.
- 167. (Original) The concentrate composition of claim 166 wherein said potassium comprises from about 7 to about 25 mEq/L.
- 168. (Currently amended) The concentrate composition of claim 167 that, when constituted with [[a]] <u>sufficient</u> liquid, produces a fluid composition further comprising: (a) from about 0 to about 0.4% by weight of a flavoring <u>agent</u>; (b) from about 0 to about 100 ppm of a clouding agent; and (c) from about 0.24 to about 0.45% by weight citric acid.
- 169. (Currently amended) A method of reducing the effects of dehydration, said method comprising administering before, during or after activity-induced fluid loss a fluid composition comprising: (a) from about 4% too about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) at least about 7 mEq/L of potassium; and (e) water; wherein the osmolality of said fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.

- 170. (Currently amended) A method reducing the effects of dehydration, said method comprising administering before, during or after activity-induced fluid loss a fluid composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filling of the extracellular fluid compartment; and (c) at least about 8 mEq/L of potassium; and (d) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 171. (Currently amended) A method of reducing the effects of dehydration, said method comprising administering before, during or after activity-induced fluid loss a fluid composition comprising: (a) from about 4 to about 10% by weight of carbohydrate source; (b) greater than about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 3 to about less than 16 mEq/L of potassium; and (e) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 172. (Currently amended) A method of reducing the effects of dehydration, said method comprising administering before, during or after activity-induced fluid loss a fluid composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 1.0 mEq/L of magnesium; (e) at least about 0.1 mEq/L of calcium; and (f) water; wherein the osmolality of said beverage fluid composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.
- 173. (Currently amended) A method of improving fluid retention, said method comprising administering a composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) at least about 7 mEq/L of potassium; and (e) water; wherein the osmolality of said composition is in the range of from about 250 to about 350 mOsm/Kg, and

24

, .

wherein said fluid composition promotes fluid retention and stimulates voluntary fluid consumption.

- 174. (Currently amended) A method of improving fluid retention, said method comprising administering a composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filling of the extracellular fluid compartment; and; (c) at least about 8 m Eq/L of potassium; and (d) water; wherein the osmolality of said composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.
- 175. (Currently amended) A method of improving fluid retention, said method comprising administering a composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) greater than about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 3 to about less than 16 mEq/L of potassium; and (e) water; wherein the osmolality of said beverage composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.
- 176. (Currently amended) A method of improving fluid retention, said method comprising administering a composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 1.0 mEq/L of magnesium; (e) at least about 0.1 mEq/L of calcium; and (f) water; wherein the osmolality of said beverage composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.
- 177. (Currently amended) A method of abating urinary loss, said method comprising administering a composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; (d) at least about 7 mEq/L of potassium; and (e) water; wherein the

osmolality of said composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.

- 178. (Currently amended) A method of abating urinary loss, said method comprising administering a composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filling of the extracellular fluid compartment; and; (c) at least about 8 mEq/L of potassium; and (d) water; wherein the osmolality of said beverage composition is in the range of from about 250 to 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.
- 179. (Currently amended) A method of abating urinary loss, said method comprising administering a composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) greater than about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 3 to about less than 16 mEq/L of potassium; and (e) water; wherein the osmolality of said beverage composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.
- 180. (Currently amended) A method of abating urinary loss, said method comprising administering a composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 1.0 mEq/L of magnesium; (e) at least about 0.1 mEq/L of calcium; and (f) water; wherein the osmolality of said beverage composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.
- 181. (Currently amended) A method of enhancing rehydration, improving fluid retention, and reducing urinary fluid loss, said method comprising administering orally or intravenously a composition comprising: (a) from about 4% to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) from about 10 to about 20 mEq/L of chloride; and (d)

at least about 7 mEq/L of potassium, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.

- 182. (Currently amended) A method of enhancing rehydration, improving fluid retention, and reducing urinary fluid loss, said method comprising administering orally or intravenously a composition comprising: (a) from about 4% to about 10% by weight of carbohydrate source; (b) from about 40 to about 78 mEq/L of ions which favor the filling of the extracellular fluid compartment; and; (c) at least about 8 mEq/L of potassium; and (d) water; wherein the osmolality of said beverage composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.
- 183. (Currently amended) A method of enhancing rehydration, improving fluid retention, and reducing urinary fluid loss, said method comprising administering orally or intravenously a composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) greater than about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 3 to about less than 16 mEq/L of potassium; and (e) water; wherein the osmolality of said beverage composition is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.
- 184. (Currently amended) A method of enhancing rehydration, improving fluid retention, and reducing urinary fluid loss, said method comprising administering orally or intravenously a composition comprising: (a) from about 4 to about 10% by weight of a carbohydrate source; (b) at least about 30 mEq/L of sodium; (c) at least about 10 mEq/L of chloride; (d) at least about 1.0 mEq/L of magnesium; (e) at least about 0.1 mEq/L of calcium; and (f) water; wherein the

osmolality of said beverage <u>composition</u> is in the range of from about 250 to about 350 mOsm/Kg, and wherein said composition promotes fluid retention and stimulates voluntary fluid consumption.

Respectfully submitted for Applicant,

XuFan Tseng (Reg. No. 55,688)
